

CLIMAGUARD

Clarity. Durability. Innovation. Protection.

WHY CLIMAGUARD

ClimaGuard Glass Coating represents a new frontier in energy-saving technology. Engineered with precision, this specialist glass coating offers unmatched performance by addressing the critical challenges of modern architecture and energy management.

Our commitment at HED Africa is to empower architects, engineers, designers and home-owners with the tools they need to create spaces that balance aesthetics, functionality, and environmental responsibility. With ClimaGuard Glass Coating, we enable our partners to meet energy efficiency goals, enhance occupant well-being, and achieve superior building performance.

UV Protection

Infrared (IR) Protection

Energy Efficiency

WHY CHOOSE CLIMAGUARD COATING

Exceptional UV Protection - Blocks harmful ultraviolet (UV) rays, safeguarding interiors and occupants from long-term UV exposure while preserving the longevity of furnishings and finishes.

Superior Infrared (IR) Reduction - Reduces infrared radiation, significantly minimizing heat transfer and ensuring optimal thermal comfort.

Drastic Solar Gain Reduction - Cuts solar heat gain, making it an ideal solution for climates with intense sunlight, reducing the load on cooling systems, and lowering energy costs.

Energy Efficiency - By limiting heat absorption and improving insulation, ClimaGuard helps reduce energy consumption, supporting green building standards and contributing to a sustainable future.
